Can You Visualize One Tonne of Greenhouse Gases?

Our service counteracts your carbon footprint **tonne for tonne** with green energy projects. But what does one tonne of greenhouse gases (CO₂e) look like?

On a consumption basis, one tonne of CO₂e is released by the burning of 350 to 400 litres of fuel, depending on the fuel type. This is equivalent to close to 2 barrels of fuel.

Another way to think of one tonne of CO₂e is as:

- one passenger's emissions from a return flight from London to San Francisco,

OR

- a 6,500km car journey (equivalent of driving from Newcastle in the North of England to Athens & BACK (not including the fuel of the ferry)!

Studies show that an average person living in a developed country produces about 8 tonnes of CO₂e in a year. A full tank of fuel of a superyacht produces several hundred tonnes of CO₂e. Hence it is easy to see the positive impact of counteracting the greenhouse gas impact of your yachting activity!

Yacht Carbon Offset Explains Carbon Offsetting Video

Yacht Carbon Offset

Yacht Carbon Offset has produced a new educational video, in which we explain why carbon offsetting is beneficial to the environment and how the carbon offsetting process works - all in 3 minutes!

This video is available to view on the [Home Page](#) of our website, or on YouTube by clicking the following link: [Yacht Carbon Offset Explains Carbon Offsetting](#).

Les Voiles d'Antibes Carbon Offsets

The 25th edition of the classic sailing regatta, Les Voiles d'Antibes, took place the 16th- 20th September 2020, despite the challenges of coronavirus and wind conditions.

Yacht Carbon Offset was delighted to support this year's historic regatta, which has welcomed vintage and classic yachts since 1996, by offsetting the event's estimated greenhouse gas emissions. We offset the emissions from both the estimated quantity of marine gasoil consumed by the participating vessels, as well as the electricity used by both the yachts and the village.

Smiling Through

Like everyone at the moment the Yacht Carbon Offset team are adapting to the new way of life. Stay safe, we're looking forwards to seeing you all again soon.
