Hill Robinson Offsets 2021 Carbon Footprint with Mikoko Pamoja

Hill Robinson is the first company in the yachting sector to offset its unavoidable carbon footprint using our new 'blue' carbon project, Mikoko Pamoja – congratulations!

Hill Robinson's significant step counterbalances its entire predicted 2021 carbon footprint generated by its corporate activity, an estimated production of over 1,250 tonnes of CO₂e. Its action is part of a wider strategy of change that Hill Robinson is implementing to reduce its environmental impact.

Mikoko Pamoja is a mangrove conservation and restoration project in Kenya. In addition to significant carbon capture and storage, this community-led project brings extensive benefits to the local population. For more information about blue carbon see our in-depth news article: [Shining the Light on Blue Carbon](#).

New Hydroelectric Project

We are excited to announce the addition of a new renewable energy ('green' carbon) project to our selection. Chacayes Hydroelectric Project is a large scale, run-of-river hydroelectric power scheme developed in the Alto Cachapoal Valley of the Andes Mountains, around 80km south of Santiago. The project utilises the hydrological resources of the Chachapoal and Cipreses Rivers to generate power from two 56.5 MW turbines

The project has been approved under the United Nations CDM Program and in line with the Verified Carbon Standard. For more information on this project

Yacht Carbon Offset

Yacht work list

Yacht Work List, a newly launched yacht management software company, completed its first carbon offset with Yacht Carbon Offset, counterbalancing its estimated carbon footprint for 2021. The calculated carbon emissions include office power, corporate flights, and travel. Congratulations to YWL for taking such positive action! In today's world, where concerns about the environment are a priority, taking steps to limit our

carbon footprint is increasingly important and helps to achieve a high environmental operating standard.

Sea Change Sailing Trust

In support of our partner, Sea Change Sailing Trust, we have donated a carbon offset of one tonne of CO₂ equivalent to counterbalance the charity's carbon footprint for 2021, helping it achieve its high environmental operating standard.

The Sea-Change Sailing Trust is a UK charity that provides accredited traditional sailing and seamanship training to disadvantaged young people and vulnerable adults.
