

Carbon Offset Your Charter Today

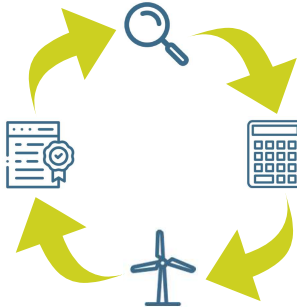

Relax & Enjoy your Charter with the peace of mind that you have counterbalanced the carbon impact of your cruise

Yacht Carbon Offset provides an immediate and effective way to counterbalance the unavoidable greenhouse gas emissions associated with your charter's fuel usage.

The Carbon Offset Process

1. We work with the charter broker and captain to identify the fuel quantity consumed during the charter.

4. We issue a personalised certificate stating the tonnes of carbon emissions offset, the quantity of fuel represented, and the project selected to complete the transaction.

2. We calculate the greenhouse gas emissions associated with the identified fuel.

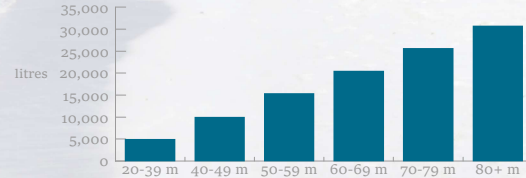

3. We complete the carbon offset by supporting a carefully selected, high-quality carbon reduction project, as detailed on our website. All projects are validated by one of four International Carbon Registries.

The Carbon Offset Price

At between **€0.03 and €0.04 per litre** the cost to offset your charter is modest.

Indicative fuel consumption per charter week

Depending on the yacht, our data suggests that a typical 7-day charter on a 50 metre yacht may consume around **15,000 litres of fuel**, which would cost just **€500 to carbon offset** (15,000 x €0.03 = €500).

Act Today

On your approval, your Charter Broker will contact us for a quote and collect a provision for the carbon offset fee as part of the Advanced Provisioning Allowance (APA). Yacht Carbon Offset will take care of the rest!
