

Yacht Carbon Offset

Carbon Offset
Your Charter Today

“Helping the superyacht community to reduce its net environmental impact since 2008”

www.yachtcarbonoffset.com

Our Service

Relax & Enjoy your charter with peace of mind that the carbon impact of the cruise is counterbalanced

Yacht Carbon Offset provides an immediate and effective way to counterbalance the unavoidable greenhouse gas emissions associated with your charter's fuel usage.

Our Carbon Offset Process

1. We work with the charter broker and captain to identify the fuel consumption of the charter.

2. We calculate the greenhouse gas emissions associated with the identified fuel and other charter activities (as appropriate).

4. We issue a personalised certificate stating the tonnes of carbon emissions offset, the emissions activities and the project selected to complete the transaction.

3. We complete the carbon offset by supporting a carefully selected, high-quality carbon reduction project. All projects are validated by one of four International Carbon Registries.

Our process is certified by Lloyds Register Quality Assurance to ISO 9001.

Our Pricing

At less than **€0.05 per litre**, the price to offset a charter is modest.

Fuel consumption for a week's charter depends on the yacht's size and operational characteristics and the charter schedule.

Indicative Fuel Consumption Per Charter Week

For example, a 7-day charter on a 50-metre yacht consuming **15,000 litres of fuel** will cost around **€600 to carbon offset** (15,000l x €0.04/litre, Jan 2023 pricing).

We also invite an **optional charity donation of €/\$/£1 per tonne of carbon offset** to support marine-focused environmental charities. See our website for more details.

Why Use Yacht Carbon Offset?

There are numerous carbon offsetting companies to choose from, but we believe Yacht Carbon Offset's **transparent and personalised service** stands out from the crowd. What's more, our process is certified by Lloyd's Register Quality Assurance.

Selected Projects

Using our service, you can support projects that are meaningful to your charter activity and produce significant carbon savings. All our carbon reduction projects are located in developing countries and include renewable energy power projects and coastal marine ecosystem projects. Here is a sample of the projects we support.

Jamaica
Wigton Windfarm
Verified to the UNFCCC by
SGS Climate Change Program

Côte d'Ivoire
Soubré Hydroelectric
Verified to Verra VCS by 4K
Earth Science Private Limited

El Salvador
Berlin Geothermal
Verified to the UNFCCC by
ICONTEC

For details of all current projects, please visit our website: www.yachtcarbonoffset.com.

Our Certificate

We certify each carbon offset transaction through the issuance of a personalised certificate.
